

Integrating AVer Visualizers & Surveillance DVRs/NVRs with AVer VC Systems

By connecting an AVer DVR/NVR and AVer visualizer to an AVer video conferencing system, users can present near real-time images from the DVR/NVR via the VC system's content sharing function or use the visualizer to show live images of any real object. Users can also take advantage of this unique set-up to contact AVer support staff to troubleshoot and resolve issues with a faulty DVR/NVR.

NOTE:

If you do not have an AVer visualizer, you can connect your AVer DVR/NVR directly to the AVer VC system using a VGA cable.
